Application No.: 10/577,613 ✓
Examiner: Nicole Kinsey White, PhD
Art Unit: 1648

Dear Mrs. Dr. Kinsey White,

This is the response to the action dated on 01/09/2008.

1. I do not agree with the restriction requirements, because nucleic acids according to the present invention encode fusion proteins according to the present invention. Thus this invention possesses unity and there are no two Groups of inventions.
2. The fusion protein according to Wahl et al. 2002 is not able
 - 2.1. to inhibit directly cell division by binding microtubules and
 - 2.2. to modify each antibody against cancer and enhance the mechanism of action.

Sincerely,

A. Cherkasky

Alexander Cherkasky, (diploma in biology at Heinrich Heine University of Duesseldorf)
